NORDSON MEDICAL is vertically integrated to supply delivery system components, sub-assemblies, and finished devices. PET Heat Shrink Tubing, balloons, polyimide, extrusions, and braid reinforced tubing are available from stock. Focused on complex catheters, device manufacturing, and design services.

SPECTRALYTICS Metals and Polymers are laser processed using the latest technology for a perfect match in any cutting, welding, or marking application. Specialists in implants and spiral cut delivery system components. Proto-typing on dedicated equipment; robust quality system results in reliable high volume production.

EUROFLEX specializes in custom semi-finished metallic components. Tubing, wire, and sheet are available in Nitinol, SS Cobalt Chrome, and Titanium. Custom alloy development, inclusion free Nitinol, clad materials, hone drilled surface finishes, and precision tolerances are available.

ATL TECHNOLOGY Provides interconnect solutions, electromechanical device manufacturing and engineer-to-engineer design support to create the highest quality and performance. Vertically integrated manufacturing is done in wholly owned facilities worldwide.

US BIO DESIGN Designs and manufactures unique braided tubular structures and high strength actuation cables. Specialized braiding equipment includes a unique 288-carrier medical braider. Extensive capabilities with either round or flat braiding technology.

ROTHGREAVES PTFE coating services featuring the DR line of finishes that can be applied to mandrels, reel to reel wire and discreet components with lengths up to 72”. Precision coil winding equipment and custom automation design and manufacturing services.

MEDIBRANE A manufacturer and designer of encapsulation coatings and covers for implants. Specialty coatings and bioabsorbable coatings are applied to nitinol and other frame based devices for a diverse range of minimally invasive surgical procedures.
Nordson Medical

Offers comprehensive product development services—from concept to launch and beyond — with the flexibility to partner at critical milestones.

ViaMed

Polymer and metallic coil and braid fabrication. An assortment of raw materials are used to fabricate structures used for catheter reinforcement, implants, and retrieval baskets.

M3 Precision

Offers a diverse range of metal and plastic machining/manufacturing with an emphasis on Swiss Micro-Machining, 5-axis Milling, and Wire EDM.

Isoprint

Offers contract printing services utilizing an ISO 13485 quality system and in-house tooling. Multi-color and 360 degree printing can be applied to tubing, handles, and finished devices.

Inventus Power

Only manufacturer to integrate and deliver battery packs, chargers, docking stations and power supplies for medical, consumer, commercial, and defense applications Engineering and manufacturing facilities are located in 10 countries across 4 continents. Lithium Ion battery solutions for the medical device industry are a specialty.

Forinno, LLC

Provides component design & manufacturing for medical device developers. Specializing in tubing modifications, 3D printing, molding, & engineering services. Quick lead times for innovation.

Cobalt Polymers

Revolutionary thin-walled Pebax, Polyolefin, and Nylon heat shrink tubing in a variety of durometers and sizes. Custom colors and sizes in addition to an extensive list of products in stock.

Surgical Specialties

For over 40 years Surgical Specialties has been the trusted, single source needle and suture materials solution to the world’s medical device companies. Our core products include high strength suture and needle attachment along with custom packaging and complex suture assembly. With SSC 360° we offer design and engineering, prototyping, validation, and regulatory support to bring your products to market on time and on budget.
